

On forms that display a price (Modifier or Kiosk forms), by default the price is located in the bottom left corner of the button.

In Form Designer a new section called PriceFont has been added to give users more control of where the pricing is positioned on the button. This enables users to further customize buttons without the limitation of having the price positioning being static.

	NavigateID	1008
+	PNGLImageList	PNGLImageList1
+	PriceFont	(TFont)

To change the positioning of the price on a given button, select the button in Form Designer and expand the **PriceFont** section by clicking the plus (+) sign to the left of the field.

+	PriceFont	(TFont)
	Color	■ cfWindowText
	Height	-11
	Name	MS Sans Serif
	Size	8
+	Style	[]
	PriceLeft	-1
	PriceTop	-1

The default price location is the bottom left corner (-1, as shown). To move the price on the button, assign the number of pixels of space to insert from the left and from the top of the button in the **PriceLeft** and **PriceTop** fields. These two values enable pricing to be placed anywhere on the button.

In addition to moving the location of the price, users can also change the Color, Font (shown in the **Name** field), Size and Style of the text within the button.
