

PixelPoint HQ Price Match User Guide

Price Match

Price Match in PixelPoint HQ allows you to match prices from one store to one or to multiple stores. It is not uncommon for prices to vary from one site to the next based on a wide variety of circumstances. PixelPoint HQ Price Match allows you to change and match the price of an item and select whether you want to apply that change to an individual store or to multiple stores.

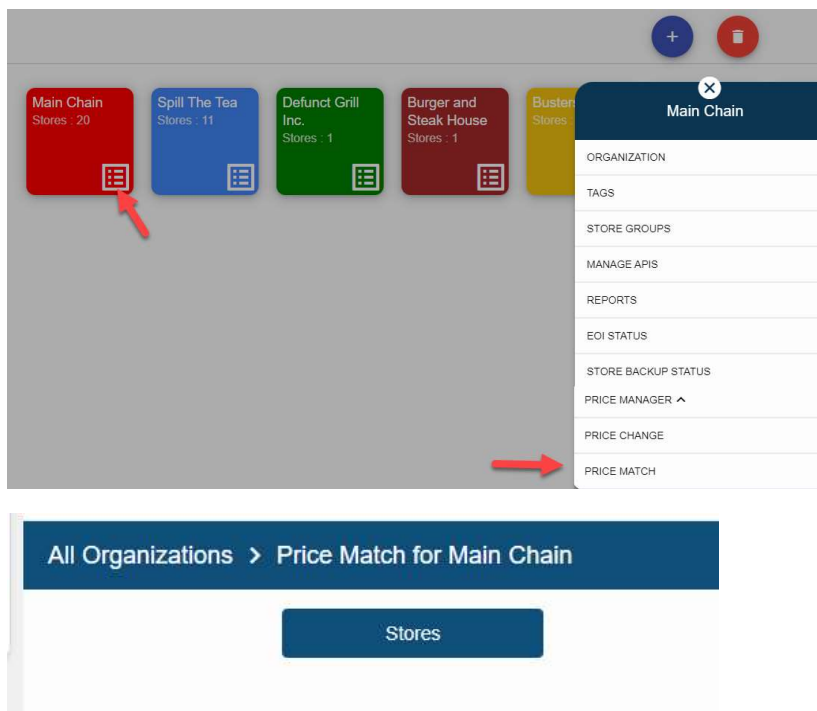

Requirements

The assumption is POS is installed and configured on the system. On HQ side, the PixelPointHQConnector should be installed as well to connect the POS store to PixelPoint HQ by a token. The token can be retrieved from the store in HQ. (For more information refer to PixelPoint HQ Installation Guide document)

- POS v17 or higher
- Licence Manager v17 or higher
- PixelPointHQConnector v244

Price Match Display

After PixelPointHQConnector installation on the store is completed, the Price Match can be accessed from the Organization menu, Price Manager and select Price Match.

On the main page, there are 2 areas to select.

- The store that the prices will be copied from.
- The store(s) that the prices will be copied to.

The Search/Filter box allows to look for a specific store.

Cancel Confirm

When the selection is confirmed, the screen shows how many product prices has been updated.

Stores		Selected to Match From: Delicious Pizza 1
Stores		Status
OrderLord AWS test Mobile Ordering		✔ Success Applied to 497 Products
Duni OrderLord in office		✔ Success Applied to 497 Products
Email		✔ Success Applied to 497 Products
Delicious Pizza 2		✔ Success Applied to 497 Products

In order for the price match to be processed, the HQ connector must be installed and running on all selected stores.

The Products must be the same on all the stores.

The duration of the update may vary. It depends on how many stores and products are getting updated. The prices will get updated in Product table, Backoffice and POS.
