

## Hourly Sales by Sales Type

The Hourly Sales by Sales Type Report shows a summary of hourly sales information for each sales type from the selected stores and date range. Options for summarizing hourly sales based on employees, transaction types, sections, revenue centers and members are provided.

Data is grouped using the following fields:

- Store
- Business Date
- Day of the Week
- Quarter
- Year
- Month

**Transaction Type:** The type of service that was provided on any given transaction (ex. Regular, Quick, etc.).

**Sales Type:** The sales type for a specific transaction, as set up in BackOffice/SystemSet.

**Section:** The description of the section (ex.. smoking, non-smoking, bar) for a given transaction.

**Revenue Center:** Specifies the user-defined revenue center for a given transaction (ex. Pool, Bar, etc.).

**Member Or Not:** Shows if a specific transaction was ordered by a member.

**Employee Started:** The name of the employee who first opened the transaction.

**Employee Closed:** The name of the employee who closed the transaction.

**Transaction\_Number:** A unique number representing a single transaction.

**Hour\_Start:** Shows the hour when the transaction was started.

**Hour:** Shows the hour when the transaction was completed.

**Customer Count:** The number of customers served for a given transaction.

**Net Sales:** The total of the transaction with discounts applied and without tax applied.

**Tax:** The total of all tax; the sum of Ta1, Tax2, Tax3, Tax4, and Tax5 in BackOffice/SystemSet.

**Final Sales:** The total amount of the transaction with taxes applied. This is the amount that the customer was required to pay, not including tip.
