PixelPoint® ChefXML

Select Electronics Kitchen Display System

Revision History

11/05/2019- Revision 5

New Policy in BackOffice NewCheckOnSplit

05/15/2019- Revision 4

New PixelKDS.ini file format; New Files

03/02/2018 – Revision 3

Functionality changes & updated screenshots.

01/13/2015 -Revision 2

Minor Content Updates and Screen Shot updates

04/19/2012 -Revision 1

New File Version Changes

02/28/2012 -Revision 0

Initial Release

Overview

This guide will help you configure Select Electronics ChefXML Kitchen Display System (KDS) to work with PixelPoint POS. PixelPoint POS and ChefXML must be installed on the system prior to following these instructions.

Requirements

- PixelPoint POS minimum v 19.10.30.723
- PixelKDS.exe v 19.10.30.723

-  [Manuals and How To](#)

-  [Utilities & System Maintenance](#)
-  [Videos](#)

- PixelKDS.ini
 - Updated ini file supplied by PixelPoint as of 3/2/2018.
- ChefXML.ini

IMPORTANT: The required PixekKDS.exe file is not part of the regular POS version update, as not all versions of the PixelKDS.exe file are compatible with all versions of POS. Therefore, for new installation of V20+ or upgrades to V20, the latest version of the PixelKDS.exe file is always located on the FTP site here: [./Upload/Latest Installers \(DO NOT REMOVE\)/CHEFXML v19](#)

Notes:

This integration with CHEFXML can function using 12.3.X of PixelPointPOS and PixelKDS, however, POS version 12.3.x is obsolete, and therefore used by the customer at their own risk, and "as is".

You also **cannot** use v12.3.x POS and PixelKDS.exe v18.x or higher - the two versions are incompatible.

It is **always** recommended that you use the latest builds of both PixelPointPOS.exe and PixelKDS.exe when available (v20.21 of POS, and V20.19 of PixelKDS, for example).
