Configuration_Patch		2021-11-30 2:49 PM
KSA Fiscal Additional Info.pdf	361 KB	2021-11-15 10:25 AM

The POS files contain the updated PixelPointPOS.exe, BackOffice.exe, and LicenseManager.exe
There is a newly created configuration patch which adds the new QR code and removes the old one
The Patch will also enable policies to allow for saving the XML checks locally
The XML checks will be saved on the server PixelPOS\TransXML\
There will be a sub folder for each day and in there will be each check XML in the format
VATNumber_CheckDateTime_TransactionNumber.xml
These check XML entries are also stored in the database and will be backed up to PixelHQ

There is **ONE IMPORTANT** Manual configuration required

After the POS upgrade 2 new fields will be added to Sysinfo SellerName and VATNumber

Once those two fields have been added the Reseller or Owner will need to enter the locations Legal Name and VAT number

In Back Office navigate to System Setup Options and Taxes Tab

System Setup Options

System Company Info **Taxes** POS Reports Preset Payment Orders Plugins Advanced Policies

In the seller field enter the legal name of the restaurant and in the Tax number field enter the restaurant's VAT number (no spaces)

The seller's name can be entered in Arabic or English as this new field is UNICODE so it will be okay even if they have the English IBM850 database
